

The purpose of this document is to define tables and their fields used throughout the project.

Pokémon Database

This is the raw dataset manually created from information available on Serebii.net and entered into Google Sheets. Some columns are not directly used in the healthcare analysis, but the dataset serves as the original source and may be used for future projects.

- National Dex Number: Unique National Pokédex number assigned to each Pokémon.
- Name: Name of the Pokémon.
- Type I: Primary Pokémon type.
- Type II: Secondary Pokémon type, if applicable.
- Ability I: Primary ability available to the Pokémon.
- Ability II: Alternate ability, if applicable.
- Hidden Ability: Hidden ability available to the Pokémon, if applicable.
- Hp: Base health stat.
- Atk: Base physical attack stat.
- Def: Base physical defense stat.
- Sp Atk: Base special attack stat.
- Sp Def: Base special defense stat.
- Speed: Base speed stat.
- Stat Total: Sum of Hp, Atk, Def, Sp Atk, Sp Def, and Speed.
- Fossil: Indicates whether the Pokémon originates from a fossil.
- Pseudo Legendary: Indicates whether the Pokémon is classified as pseudo-legendary.
- Ultra Beast: Indicates whether the Pokémon is classified as an Ultra Beast.
- Paradox: Indicates whether the Pokémon is classified as a Paradox Pokémon.
- Legendary: Indicates whether the Pokémon is classified as Legendary.
- Mythical: Indicates whether the Pokémon is classified as Mythical.
- Region: Main region associated with the Pokémon.

Patient Information

This table is generated from the Pokémon dataset using Python. Twenty-five records are randomly selected from each of nine represented regions for a total of 225 synthetic patients.

- PatientID: Unique identifier assigned to each synthetic patient.
- National Dex Number: Original National Pokédex number from the source dataset.

- Name: Pokémon name used as the synthetic patient name.
- Region: Region associated with the patient.
- Type I: Primary type from the source dataset.
- Type II: Secondary type, if applicable.
- Hp: Base health stat from the source dataset.
- Atk: Base attack stat.
- Def: Base defense stat.
- Sp Atk: Base special attack stat.
- Sp Def: Base special defense stat.
- Speed: Base speed stat.
- Stat Total: Total of the six base statistics.

Patient Diagnosis

This table contains one synthetic diagnosis record for each patient.

- DiagnosisID: Unique identifier for each diagnosis record.
- PatientID: Identifier linking the diagnosis record to the Patient Information table.
- Diagnosis: Synthetic medical condition assigned to the patient.
- Diagnosis Date: Date the patient was assigned the diagnosis.

Patient Treatments

This table contains the synthetic treatment associated with each diagnosis.

- TreatmentID: Unique identifier for each treatment record.
- DiagnosisID: Identifier linking the treatment to the related diagnosis record.
- PatientID: Identifier linking the treatment record to the Patient Information table.
- Treatment: Synthetic treatment assigned based on the patient's diagnosis.
- Treatment Start Date: Date the treatment began.

Patient Visits

This table contains one synthetic visit record for each patient.

- VisitID: Unique identifier for each visit record.
- PatientID: Identifier linking the visit to the Patient Information table.
- Visit Date: Date the patient visited the medical facility.
- Visit Type: Category of visit, such as Primary Care, Specialist, Emergency, Urgent Care, or Follow-Up.

- Visit Cost: Synthetic cost associated with the visit.
